This book leads readers through an intriguing examination how books began and have evolved through history, and explores where future technologies may lead them. From ancient clay tablet and scrolls to medieval manuscripts and printed books to personal computers and iPads, this guide examines the fascinating history of books from 4000 BCE to the present. At each step of this evolution, technologies are examined and evaluated to show how these ideas are present from the very beginning of written communication. Moving chronologically from the ancient world to the present, the book shows how written communication media evolved from cuneiform to the Kindle. Focusing on key technologies and vital periods of historical transition, it traces an evolution that elucidates the history of the written word, at each step examining and evaluating such aspects of technologies as memory capacity, readability and writability, durability, recyclability, information security, ease and mode of access, and cost. Additional attention is paid to how these technologies were made, how they were circulated, and who was reading them. Provides faculty and students with a brief but fascinating and engagingly written textbook Includes hands-on activities and course assignments that encourage student learning Features interesting factoids and illustrations, making this book useful as a text, as a professional guide, or for pleasure reading

An illustrated, large-format edition of the best-seller has been expanded to encompass the remarkable advances that have occurred in science and technology over the past eight years, with a new chapter on Wormholes and Time Travel and more than 240 full-color, captioned illustrations. 100,000 first printing.

THE book the Time Lords (including the Doctor) read when studying at the Academy, the full-color in-world history that pieces together the true story of Gallifrey from the many and contradictory accounts that survived the Last Great Time War. Doctor Who: A Brief History of Time Lords tells the story of all of this ancient, legendary civilization, of notable historical figures, of Gallifrey itself, of the Time War and much more. The planet Gallifrey. The Shining World of the Seven Systems. Often to be found in the constellation of Kasterborous. Birthplace of one of the oldest civilizations in the universe: The Time Lords. From their technologies and strategies to the renegades like the Master and the Doctor himself, this is the definitive guide to the oldest and most powerful civilization in the universe. They invented black holes, transmits, stellar manipulators, and they atrophied. A bunch of elderly academics in funny hats, the Time Lords watched the whole history of creation. This was the civilization that inflicted some of its most renowned and deadly renegades and criminals on the universe: the Master, the Rani, the Monk, the War Chief, yet it was also the benevolent power that rid the cosmos of the Great Vampires, the Racnoss and the Fendahl. Featuring full-color, never-before-seen illustrations and a beautiful interior design, this is a highly collectible in-world companion no Whovian can be without.

At the turn of the 19th century, the Ottoman Empire straddled three continents and encompassed extraordinary ethnic and cultural diversity among the millions of people living within its borders. This text provides a concise history of the late empire between 1789 and 1918, turbulent years marked by incredible social change.

What will planet Earth be like in twenty years? At mid-century? In the year 2100? Prescient and convincing, this book is a must-read for anyone concerned about the future. Never has the world offered more promise for the future and been more fraught with dangers. Attali anticipates an unraveling of American hegemony as transnational corporations sever the ties linking free enterprise to democracy. World tensions will be primed for horrific warfare for resources and dominance. The ultimate question is: Will we leave our children and grandchildren a world that is not only viable but better, or in this nuclear world bequeath to them a planet that will be a living hell? Either way, he warns, the time to act is now.

The epic story of the scientists through the ages who have sought answers to life ' s biggest mystery: How did it begin? In this essential and illuminating history of Western science, Bill Mesler and H. James Cleaves II seek to answer the most crucial question in science: How did life begin? They trace the trials and triumphs of the iconoclastic scientists who have sought to solve the mystery, from Darwin ' s theory of evolution to Crick and Watson ' s unveiling of DNA. This fascinating exploration not only examines the origin-of-life question, but also interrogates the very nature of scientific discovery and objectivity.

One of the world ' s most beloved and bestselling writers takes his ultimate journey -- into the most intriguing and intractable questions that science seeks to answer. In A Walk in the Woods, Bill Bryson trekked the Appalachian Trail -- well, most of it. In In A Sunburned Country, he confronted some of the most lethal wildlife Australia has to offer. Now, in his biggest book, he confronts his greatest challenge: to understand -- and, if possible, answer -- the oldest, biggest questions we have posed about the universe and ourselves. Taking as territory everything from the Big Bang to the rise of civilization, Bryson seeks to understand how we got from there being nothing at all to there being us. To that end, he has attached himself to a host of the world ' s most advanced (and often obsessed) archaeologists, anthropologists, and mathematicians, travelling to their offices, laboratories, and field camps. He has read (or tried to read) their books, pestered them with questions, apprenticed himself to their powerful minds. A Short History of Nearly Everything is the record of this quest, and it is a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge, as only Bill Bryson can render it. Science has never been more involving or entertaining.

A reissue of a charming little illustrated volume originally published in 1974 which walks the reader through the highlights of the history of the University of California.

A wonderfully concise and readable, yet comprehensive, history of the Mediterranean Sea, the perfect companion for any visitor -- or indeed, anyone compelled to stay at home. "The grand object of travelling is to see the shores of the Mediterranean." Samuel Johnson, 1776 The Mediterranean has always been a leading stage for world history; it is also visited each year by tens of millions of tourists, both local and international. Jeremy Black provides an account in which the experience of travel is foremost: travel for tourism, for trade, for war, for migration, for culture, or, as so often, for a variety of reasons. Travellers have always had a variety of goals and situations, from rulers to slaves, merchants to pirates, and Black covers them all, from Phoenicians travelling for trade to the modern tourist sailing for pleasure and cruising in great comfort. Throughout the book the emphasis is on the sea, on coastal regions and on port cities visited by cruise liners - Athens, Barcelona, Naples, Palermo. But it also looks beyond, notably to the other waters that flow into the Mediterranean - the Black Sea, the Atlantic, the Red Sea and rivers, from the Ebro and Rhone to the Nile. Much of western Eurasia and northern Africa played, and continues to play, a role, directly or indirectly, in the fate of the Mediterranean. At times, that can make the history of the sea an account of conflict after conflict, but it is necessary to understand these wars in order to grasp the changing boundaries of the Mediterranean states, societies and religions, the buildings that have been left, and the peoples' cultures, senses of identity and histories. Black explores the centrality of the Mediterranean to the Western experience of travel, beginning in antiquity with the Phoenicians, Minoans and Greeks. He shows how the Roman Empire united the sea, and how it was later divided by Christianity and Islam. He tells the story of the rise and fall of the maritime empires of Pisa, Genoa and Venice, describes how galley warfare evolved and how the Mediterranean fired the imagination of Shakespeare, among many artists. From the Renaissance and Baroque to the seventeenth-century beginnings of English tourism - to the Aegean, Sicily and other destinations - Black examines the culture of the Meditterraean. He shows how English naval power grew, culminating in Nelson's famous victory over the French in the Battle of the Nile and the establishment of Gibraltar, Minorca and Malta as naval bases. Black explains the retreat of Islam in north Africa, describes the age of steam navigation and looks at how and why the British occupied Cyprus, Egypt and the Ionian Islands. He looks at the impact of the Suez Canal as a new sea route to India and how the Riviera became Europe's playground. He shows how the Mediterranean has been central to two World Wars, the Cold War and ongoing conflicts in the Middle East. With its focus always on the Sea, the book looks at the fate of port cities particularly - Alexandria, Salonika and Naples.
