In 1958 an academic paper on corporate finance written by two professors (Merton Miller and Frances Modigliani, who were later awarded the Nobel prize for their research efforts) was published in The American Economic Review. One prime conclusion of their paper was that the exact form of a firm's capital structure did not affect the firm's value. Later papers by the same two authors and by many others modified the assumptions and changed this conclusion. We now think that capital structure decisions do affect a firm's value and corporate managers should understand better the financing alternatives that are available. One of the most important financial decisions is the decision to buy or lease assets. The leasing industry is large and getting larger. Unfortunately, it is very easy for a firm to evaluate incorrectly lease alternatives (see Chapter 12). The capital structure decision is one of the three most important financial decisions that management make (the distribution of earnings and the capital budgeting decisions are the other two contenders). Managers should increase their understanding of capital structure alternatives

and remember that choosing the best capital structure is an art and not an exact simple calculation. But applying the art can be improved with understanding.

For the introductory finance course-undergraduate corporate finance or financial management-required at all undergraduate business schools. Get the picture and develop a fundamental understanding of finance. Students often miss the big picture, viewing finance as a set of unrelated topics, tools, and techniques. In order to help students see the big picture, this text provides an introduction to financial decision-making that links the concepts to five key principles of finance. Authors Arthur J. Keown, John D. Martin, and Sheridan Titman have incorporated significant revisions that weave currency, relevance, and real-world issues into the pages of this well-know finance text.

Cost of Capital in Litigation addresses cost of capital issues in litigation and discusses major decisions, highlighting how to avoid errors that have often been made by experts. The book helps the attorney and valuation expert understand the decisions within the context of the theory of cost of capital and includes a chapter on cross-examining experts on cost of capital issues. Throughout, there are citation to relevant material and cross-reference to Cost of Capital: Applications and Examples, Fourth Edition.

Inhaltsangabe:Abstract: The purpose of this thesis is to discuss some important reasons for the recent boom of Internet stocks, and to show and assess different methods to evaluate them. The Internet is a medium which is yet in the early days of its development and which will revolutionize communication habits, trade and leisure time behavior in an unseen manner. I will show this in the chapters 2 and 3 with

psychological reasons for the recent boom. After that I present 3 typical Internet companies (Yahoo!, eBay, and Amazon.com) with their business content, financial data, and future outlook. Afterwards, the analyzing part of this thesis starts, and I demonstrate which figures an investor should look at in order to have a broad overview about the investment. In chapter 5 I present some financial figures from both the income statement as well as the balance sheet, in chapter 6 I give a survey of ratios which are used from analysts and make some comments about how practical they are. Subsequently, chapter 7 deals with more traditional valuation methods, used by institutions like the Federal Bank of America. These are general methods in order to show whether markets are over-/ undervalued or not. After that, I present the valuation models used by investment banks: Economic Value Added (EVA, chapter 9), Discounted Cash Flow (DCF, chapter 10), Real options theory (chapter 11), and multiples (chapter 12). In the last part I summarize the outcome and give an outlook how Stock orders are based on expectations only.

Aswath Damodaran, distinguished author, Professor of Finance, and David Margolis, Teaching Fellow at the NYU Stern School of Business, have delivered the newest edition of Applied Corporate Finance. This readable text provides the practical advice students and practitioners need rather than a sole concentration on debate theory, assumptions, or models. Like no other text of its kind, Applied Corporate Finance, 4th Edition applies corporate finance to real companies. It now contains six real-world core companies to study and follow. Business decisions are classified for students into three groups: investment, financing, and dividend decisions.
